Release Note for Vigor2760 Series (Delight)

Firmware Version: 3.7.8.2
Release Date: June 1, 2015
Applied Models:
Vigor2760, Vigor2760n, Vigor2760Vn

DrayTek launches Vigor2760 series – high speed router, perfectly complied with VDSL2/ADSL2/ADSL2+ environment including Vigor2760, Vigor2760n and Vigor2760Vn for speed-wanted customers. For more details of the product information, please visit our website on http://www.draytek.com.

> **Note:** For DSL models, there will be two folders: STD and VECTOR. The files in VECTOR folder implement a new DSL driver, which supports G.Vectoring on VDSL. If you're using a VDSL line, VECTOR firmware may brings out better performance; however, please consult your ISP to check if G.Vectoring is required. We also provide two versions of Vector firmware to avoid the interoperability issue. You could just try the other one if the one you use cannot synchronize or get the speed that you expected.

New Features

- None.

Improvement

- Corrected: PPPoE of WAN1 could not work if VLAN tag is set as "2".
- Improved: Disable insecure renegotiation to prevent Man-in-the-middle attacks on SSL.
- Improved: Improve the telnet command of '`object sms`'.
- Improved: Improve the telnet command of '`show dns`' to support Multi-LAN.

Known Issue

- None.

Notes

- "v2760_3782" is used for standard version.

- "v2760_v1_3782" and "v2760_v2_3782" are used for supporting vectoring service. It is designed specially for the ISP providing VDSL2 vectoring service. For IOP issue, you can choose "v2760_v1_3782" or "v2760_v2_3782" which has better VDSL performance with your ISP to use.
