

# Release Note for VigorACS SI

**Software Version: 1.0.4**

**Built Date: November 15, 2010**

---

## New Features

- Add wireless configuration for wireless CPEs.
- Add DSL configuration for DSL CPEs.
- Add NAT session report and graph.
- List CPE firmware from Draytek website.
- Add trace route/ping mechanism.
- Add license page for wholesale users with expire date / nodes information.
- Add management port on CPE URL link.
- Add the wholesale wizard.

## Improvement

- Improved: Enhance the parameter layout and editor on device management.
- Improved: Detect the device reboot from device WUI.
- Improved: Known devices stay in unknown device list because they are not placed in a sub-network
- Improved: Wholesale users don't see unknown devices, but only root users do.
- Improved: Remove blank on Modem Firmware version and Software version fields of Firmware Upgrade Profile.
- Improved: While doing a firmware upgrade, all the configuration files will be seen.
- Improved: If a user upgrades a CPE via **System>>Firmware upgrade**, VigorACS SI will automatically show files which are already in VigorACS SI.
- Improved: Modify alarm view. User can see all of the user groups' alarms at the same time. Users don't need to specify a user group.
- Improved: User must enter the entire address, otherwise the search engine cannot work.
- Improved: Save subnet work setting recursively for viewing alarms, also for Child networks.
- Improved: Add time interval options on statistics.

## Known Issue

- STUN is not working if VigorACS server is using PPPoE or IPv6.
- There is '%' character on MySQL's password.
- Can not detect CPE down status if CPE uses STUN and behind NAT.

## Notes

### *Modifications*

- None
