Release Note for VigorAP 802

Firmware Version:	1.4.3
Release Type:	Normal
Applied Models:	VigorAP 802

VigorAP 802, a 11ac dual-band wall plug AP, can be used to bridge any Ethernet device to a network. It is not necessary for you to spend time and money installing expensive Ethernet cable to share your Internet connection or HD / SD video stream at home. Just plug VigorAP 802 to the power outlet on the wall. You can get stable and fast speed for data transmission at any site in your house.

New Features

- Add master AP group ID and group key.
- Add the default DHCP client ID for identifying VigorAP.

Improvement

- Improved: Support "AutoSelect" for the 2.4GHz channel as the default setting.
- Improved: The WebUI Login information can be shown on Diagnostics>>System Log.
- Corrected: An issue of 5GHz disconnected occasionally.
- Corrected: An issue of ping Wi-Fi client after changing the connected AP.
- Corrected: An issue of setting special characters on the Device Object configuration file.
- Corrected: An issue of schedule status indicator not working if Daylight Saving was enabled.

Known Issue

- None.

Notes

- None.
