

Release Note for VigorC510 Series

Firmware Version:	5.3.2.1
Release Type:	Regular – Upgrade recommended when convenient, as it includes general improvements and optimizations
Applied Models:	VigorC510 / VigorC510ax

The VigorC510 series is a 5G NR WAN router equipped with four 1Gbps LAN ports. It features an advanced bandwidth control mechanism, including IP-layer control, QoS, NAT session limitation, and bandwidth borrowing, to enable easy, flexible, and reliable access control and bandwidth management.

New Features

- None.

Improvement

- Corrected: An issue with unexpected failure to upgrade the firmware via WUI.

Known Issue

- None.

Note

Please ensure that you use the ".rst" firmware file when recovering the router. Note that uploading the ".rst" file will reset the router to factory default settings.

For certain models, a separate ".rst" (restore) firmware file may not be provided. If the ".rst" version is not available - such as for models like the Vigor3912S, DrayTek switches, DrayTek access points, and DrayOS5 routers - please manually rename the file extension of the ".all" or ".sfw" firmware file to ".rst" to create an equivalent RST firmware file.
